- Load Capacity 250 Kg
- Energy Saving Led Lighting Throughout the Lift
- No Separate Machine Room
- Back-Up Battery Pack Allows Return to the Next Lower Floor in the Event of a Power Failure

Home lifts have become very desirable over recent years; not just for solving access issues, but also for home-owners who wish to either future-proof their home or simply make getting up and downstairs a more pleasant experience. In most cases, home lifts have relatively light usage and are often used when an occupant is alone or the building is sparsely occupied. As a result, they have to be safe, easy to use and extremely reliable - all the qualities of a Niche Rigel home lift.

The Niche Rigel home lifts are really easy to install, much smaller than most platform lifts and significantly smaller than traditional lifts. All of the machinery required to operate the lifts fits inside the lift structure and only requires a minimal pit. Our home lifts don't have a traditional lift car, therefore the internal space for passengers is maximised, and the external dimensions are significantly smaller than found with most lifts.

One of the key features of Niche Rigel home lifts is their manufactured quality. Great care is taken to ensure the fit and finish of your lift is complimentary to your home. The lift also has to endure, and their stylish design and durable finishes make long-term cost of ownership very attractive.

Due to their structure, Niche Rigel lifts don't require any major structural alterations to the surrounding building (subject to space) and can travel up to nine metres. They can be installed virtually anywhere in your home, potentially taking passengers from the living room to the bedroom, or from the hallway to the landing - the options are yours.

Niche Rigel lifts are also fully compliant with the EC Machinery Directive 2006/42/EC, making them the perfect solution to suit the needs of new or existing homes.

Benefits

- Small footprint
- Up to 9 metres of travel
- Shaft enclosure
- Three platform sizes available
- Screw driven, with automatic lubrication system
- It requires a minimal pit or can be supplied with a ramp
- Low running and service costs
